

Vision Alert

Automate reporting tasks on an event or time-driven basis

Vision Alert enhances Vision's capacity to identify, analyse and report on performance and trends concealed within your database. Vision Alert automates aspects of the reporting process facilitating the inquiry and analysis of your maintenance, performance and revenue-generating assets.

ACT - DON'T REACT

Vision Alert is an easy-to-use, highly flexible means of automating reporting tasks on an event or time-driven basis. Features called 'Alerts' enable Vision Alert to make automated responses to specified conditions in Vision reports.

Vision Alert establishes automated reporting to significantly increase the rate at which information can be extracted, analysed and reported on. From within a familiar desktop environment, it interrogates data without expert assistance or technical knowledge.

AUTOMATED EXCEPTION REPORTING

Automate as many Tasks as you require. Vision Alert allows any number of Tasks to be created that contain interdependent Processes. If a financial limit is exceeded, for example, an Alert could be triggered to generate one or more predetermined responses such as printing a report, distributing the report via e-mail, outputting it in either HTML, PDF or to a Microsoft Excel file.

Vision Alert schedules Tasks to run automatically at any pre-determined time or frequency without further prompting. These Tasks can be changed easily and quickly according to your requirements. Vision Alert Processes can be re-scheduled automatically if certain conditions are not met, for example, if a file is not available for processing.

REPORT CASTING

Vision Alert communicates directly with your applications to push information to your desktop or netEnterprise. View retained reports in Vision XL or automatically output reports in HTML.

FLEXIBLE DEPLOYMENT

Vision Alert can be deployed either from the client or server. This allows you to schedule and execute Tasks using either a Local Area Network (LAN) or a Wide Area Network (WAN). Vision Alert Manager deployed on either the client or server then executes Tasks at scheduled times.

PRODUCT FEATURES

- Schedule Tasks to process on a time or event basis.
- Create multiple Tasks on multiple servers. Direct communication with Microsoft Excel, Vision XL, Vision netEnterprise, etc..
- Can be used independently to create, edit and schedule Tasks.
- Using the server-based Vision Alert, a Task can be executed without the client machine running.
- Vision Alert uses Greenwich Mean Time (GMT) to resolve international time differences.
- Security features include the encryption of data transmitted between client and server to prevent unauthorised access.
- Distributed Tasks can be password protected.
