VISION

Vision Executive

Get a top-down view of your entire business

Vision Executive is a dynamic analysis and reporting application that can be utilised on your desktop or across the web. Vision Executive provides tools to help uncover and analyse trends, problems and opportunities that are often concealed within corporate transactional data. Reports can be easily created and analysed at any time. Reporting is not limited to a single application. Vision Executive can combine data from multiple applications into a single, concise report.

EXECUTIVE ANALYSIS

Delve further into the details of your report by applying Vision Executive's analytic functions: Drilldown, Expand, Breakout and Cube Analysis. Frequently used analysis procedures can be saved and run to update the report. The analysis paths can be stored to be available every time a report is prepared.
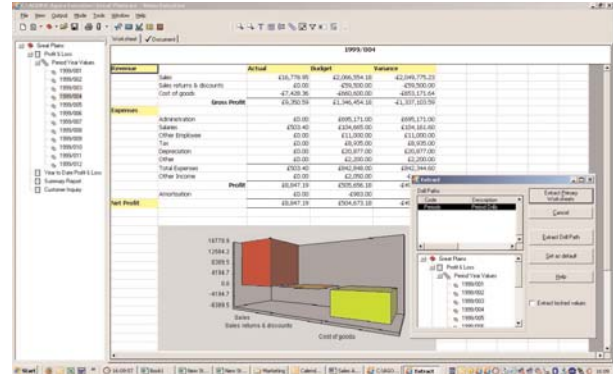

VISION SECURITY

Vision Executive provides security features to ensure that only authorised users can access sensitive data. Assigned user privileges are fully respected. The information a user can access will depend on the privileges assigned to that user.

REPORT BREAKOUT

Breakout automatically creates like reports based upon the combination of the selected output items. Multiple levels of Breakout can be applied to a query. For example, you can break out a report by market code and period.

DRILL PATH AND DRILL DATA

The functions Drilldown and Breakout create drill paths, which can be saved and replayed. You can choose the format and layout of drill results. Your design preferences are maintained for future drill results.

Vision Executive presents a top-down view of your entire business with direct access to your business data

REVIEW RETAINED REPORTS

Vision Executive reviews the history of retained reports. This optimises performance through offline viewing and reducing the need to re-extract data.

REPORT PROMPTING

Report Prompting allows you to define the main criteria that drives the report. Before the report is extracted, the report drivers can be modified using intelligent prompts.

BROWSER AND PORTAL ACCESS

Vision Executive enables content to be presented to browsers or embedded within portal applications. The same Executive work-books can be deployed to full or web clients.

PERFORM MULTI-DIMENSIONAL ANALYSIS

Use Cube Analysis to perform multi-dimensional analysis and drill down on live relational data. Vision enables any query to be output as a cube. This provides the capability to slice and dice data held in relational databases. Analyse a report, cell or group of cells by performing ad hoc drills and save cubes for offline browsing.
